## CSS Preprocessors

SASS → Syntactically Awesome Stylesheet

↳ It is CSS preprocessor that extends capabilities of traditional CSS.

- It is scripting language that provides features like
  - → Variables
  - → Nesting
  - → Mixins
  - → Inheritance

## CSS Preprocessors

- {Less} → Lean Style Sheet
- Stylus
- Sass → Popular

## Introduction to SASS

- Extensions used < sass, scss } These both are not understable by browser.
- well-organised
- share across projects

| In CSS | Sass |
| --- | --- |
| h1 { | h1 |
| color : – | Color : |
| bg-color: – | bg color: |
| } | |

- SASS – uses indentation-based syntax similar to Python coding

SCSS → CSS-like syntax with curly braces
